## ALUMINIUM PIPEWORK SYSTEM

Infinity pipework and fittings are an advanced solution for use in air, vacuum, nitrogen generation and other inert gas applications.

Constructed from extruded aluminium, our pipework offers superior strength and corrosion resistance compared to traditional compressed air piping materials, ensuring long-lasting reliability and performance.

The push-in connection method simplifies installation with minimal need for additional clips or fasteners. It is easily adjusted, reconfigured or reused, making it ideal for future system expansions. Installation is straightforward, thanks to a small range of easy-to-use tools and accessories, readily available from local distributors.

## SIZE FOR SIZE, THERE IS NO COMPARISON

A key advantage of the Infinity aluminium pipework system lies in its superior air flow performance when compared to galvanised and plastic pipe systems of the same external diameter. Due to its thinner wall construction, the Infinity aluminium pipe offers a significantly larger internal diameter, resulting in an average **23% increase in air flow**.

As a result, in many cases you can opt for the next size down in the Infinity pipe system and still achieve equal or even better airflow than with plastic piping - not only providing enhanced performance but also substantial cost savings, in terms of initial material costs and ongoing operational running costs.

### DISTRIBUTOR

### INFINITE QUALITY

- Internal and external corrosion-free coating
- Consistent air quality to every outlet
- 10 year warranty on Infinity pipework and fittings
- Minimal expansion - no sag or bow
- Total metal system

### INFINITE ENERGY SAVING

- Extremely low pressure drop
- Reduced energy costs due to smooth air flow
- Efficient condensate removal
- Range of pipe diameters from Ø20mm - Ø168mm for optimum system efficiency
